L003: place value, decimals and estimation

F1

Tomorrow calculate $-4 \times (-6)$ and $24 \div 4 \times 2$. Explain one answer.

F2

Before L003, find 3.7×10 and $48 \div 100$. State the value of 6 in 4.063.

Read before the next lesson

Each place to the left is ten times the value. For example, $2.47 \times 10 = 24.7$: the digits take places worth ten times as much. Estimate an answer before using a calculator.

Bring your methods and one question. Retry F1 in one week.
