

Learner workbook: Equation-solving pathway

Objective: Select equation and inequality methods appropriate to the tier.

Calculator condition: Non-calculator core; calculator optional only for checking where labelled.

Connect & Check

- State the objective and timeline. Retrieve graph transformations pathway or a prerequisite. Diagnose a common error before modelling.
- Write one starting question you want answered today.

Choose your route

Route A: Visual Use a diagram, graph, table or annotation first.	Route B: Method Use a worked method, formula or calculation chain first.	Route C: Explain Start with words: what is known, what is changing, and why.
--	--	--

Share

- Pairs compare methods or predict a result for equation-solving pathway. Ask for a reason, not only an answer.

Present

- Foundation: linear equations and number-line inequalities.
- Higher: iteration, quadratic inequalities and regions

Apply: supported to independent

Recall: Retrieve the key fact or method needed for equation-solving pathway.

Working: _____

Check/explanation: _____

Core practice: Solve $3x^2 - 15x = 0$ and check both solutions.

Working: _____

Check/explanation: _____

Reasoning: Solve $x + y = 11$ and $2x - y = 4$, then show both checks.

Working: _____

Check/explanation: _____

Exam-style: Solve an exam-style problem involving equation-solving pathway. Show working, include a check and interpret your answer.

Working: _____

Check/explanation: _____

Recall & Review

- Revisit the objective. Learners solve a fresh item without prompts, explain a check, correct one error and record the next practice.

WWW: _____ EBI: _____

Recall & Review: feedback and extension integration

Lesson L087: Equation-solving pathway

Objective: Select equation and inequality methods appropriate to the tier.

Timing for a 60-minute lesson

0-7 Connect & Check; 7-14 Share; 14-25 Present/model; 25-44 Apply route choice/practice; 44-52 independent exam-style check; 52-60 Recall & Review, WWW/EBI and next step.

Recall & Review evidence

At the end of the lesson, solve a fresh question without prompts, explain one check, correct one error and record the next practice step.

What Went Well (WWW)

I represented the algebraic structure accurately, kept each transformation valid and checked the result by substitution, graph or equivalent reasoning.

Even Better If (EBI)

I will show the missing inverse operation or algebraic step, keep signs and brackets accurate and test the result in the original relationship.

Integrated stretch and deep challenge

Stretch: Solve $3x^2 - 15x = 0$ and check both solutions.

Deep challenge: Solve $x + y = 11$ and $2x - y = 4$, then show both checks.

My next-step response
