

Formative mini test

AQA A Level Sociology 7192 • L005 • v1.0 • 15 marks • 15 minutes

CONNECT & CHECK | SHARE | PRESENT | APPLY | RECALL & REVIEW

Complete without notes after the lesson or for independent consolidation. This original classroom test is separate from the six-item workbook retrieval quiz.

1 Distinguish statistical normality from a normative judgement. [2]

2 Explain why a percentage needs a denominator. [3]

3 Name the term for changes across a person's life. [1]

Evidence and application

Fictional cases, designed for comparison rather than representing UK frequencies. A: two parents and a child share care equally. B: two parents and a child have the same family form as A, but one parent does most unpaid care. C: a lone parent and child receive regular support from a relative living elsewhere. D: an adult lives alone after previously cohabiting; the adult maintains family ties across addresses. No case establishes which arrangement is best.

4 Using cases A and B, identify one similarity and one difference, explaining each. [4]

5 Explain why case D cannot establish a national trend. [2]

6 Using case C, explain a limit of counting only co-resident family members. [3]

After marking

Score ____ / 15. Correct your least secure idea and explain it again tomorrow. This diagnostic score is not a predicted grade.
