Read the three passages, then answer. Use fictional examples; no external research or personal disclosure is required.

## Engels: property and inheritance

Engels linked the development of particular family arrangements to private property and the transmission of wealth through male lines. This is a historical Marxist argument about ownership and class relations. It should not be presented as a proven universal account of all family origins. Its analytical question remains useful: how can transfers within families help preserve the advantages of property owners?

## Two connected concepts

Capitalism: An economic system centred on private ownership and production for profit.

Bourgeoisie: In Marxist theory, the class owning major means of production.

## A question to bring

Explain how inheritance may reproduce a property-owning advantage. Assets passed to children give them access to resources others may lack. Ownership can persist across generations even when heirs did not create the original wealth.

### F1

Summarise the main idea in the first passage in one or two sentences.

---

---

### F2

Define capitalism and give an original fictional example.

---

---

### F3

What evidence would you need to test the opening claim? Retrieve two current-lesson concepts tomorrow and next week.
